MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR
DEPARTMENT OF MATHEMATICS
CURRICULUM WORKSHOP
3rd and 4th September 2021

M.Sc. (Mathematics)

PROPOSED SYLLABUS
September 2021

Malaviya National Institute of Technology Jaipur

Department of Mathematics

Proposed scheme for M.Sc. (Mathematics)

M.Sc. I Semester					
Course Code	Course Name	Course credits	L	T	P
21MAT	Linear Algebra	4	3	1	0
21MAT	Abstract Algebra	4	3	1	0
21MAT	Ordinary Differential Equation	4	3	1	0
21MAT	Real Analysis	4	3	1	0
21MAT	Multivariable Calculus	4	3	1	0
21MAT	Computer Language	1	1	0	0
21MAP	Computer Lab	2	0	0	4
	I Semester credits	23			

	M.Sc. II Semester				
Course Code	Course Name	Course credits	L	T	P
21MAT	General Topology	4	3	1	0
21MAT	Complex Analysis	4	3	1	0
21MAT	Introduction to Numerical Analysis	4	3	1	0
21MAT	Partial Differential Equation	4	3	1	0
21MAT	Probability and Statistics	4	3	1	0
	Program Elective-I	3	3	0	0
	II Semester credits	23			

	M.Sc. III Semester				
Course Code	Course Name	Course credits	L	T	P
21MAT	Functional Analysis	4	3	1	0
	Program Elective-II	3	3	0	0
	Program Elective-III	3	3	0	0
	Program Elective-IV	3	3	0	0
	Program Elective-V	3	3	0	0
21MAD	Dissertation-I	4	0	0	08
	III Semester credits	20			

	M.Sc. IV Semester				
Course Code	Course Name	Course credits	L	T	P
	Program Elective-VI	3	3	0	0
	Program Elective-VII	3	3	0	0
	Open Elective	3	3	0	0
21MAD	Dissertation-II	8	0	0	16
	IV Semester credits	17			

Type of course	**Credits assigned**	**Range available**
Core Course	47	30-50
Program elective	21	15-24
Open elective	3	0-6
Dissertation	12	10-16
Total	**83**	**80-90**

Semester	**Credits assigned**	**Range available**
I	23	20-24
II	23	20-24
III	20	20-24
IV	17	10-18
Total	**83**	**80-90**

Total Credits to be earned in order to become eligible for award of M.Sc. (Mathematics) (Two Year Full Time) Degree: 83 Credits

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Linear Algebra

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : UG Algebra

Course Contents

Review of fields, definition and basic examples. Vector spaces, subspaces, linear combinations, spanning sets, basis and dimension, linear transforms. Rank and nullity of linear transformation. Representation of transforms by matrices. Duality and transpose of a linear transformation. Linear functional dual space.

Inner product spaces. Orthogonality, Gram-Schmidt orthogonalization. Orthogonal projections. Primary decomposition theorem (statement only). Linear functional and adjoins. Unitary and normal operators.

Eigenvalues and Eigenvectors, characteristics polynomials, minimal polynomials. Cayley Hamilton's theorem, triangularization, diagonalization. Spectral Theorem for normal operators. Jordan canonical form.

Recommended Readings

Text book:-

1. Nair M.T., Singh A., *Linear algebra,* Springer, 2018.
2. Axler S., *Linear Algebra Done Right*, Springer UTM, 1997.

Reference book:-

1. Hoffman K. and Kunze R., *Linear Algebra,* Prentice Hall of India, 2005
2. Vineberg E.B., *A course in algebra,* Graduate text in Mathematics, volume 56, AMS, 2003.
3. Rao R.A. and Bhimasankaram P., *Linear Algebra*, Springer, 2000.
4. Strang G., *Linear Algebra and Its Applications*, Pearson, 2005.

Online resources-

1. Linear algebra: NPTEL (https://nptel.ac.in/courses/111/106/111106051/#)

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Abstract Algebra

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : Undergraduate Algebra

Course Contents

Review of basic group theory, Normal subgroups, Quotient groups, homomorphism and isomorphism theorems, Maximal subgroups and Composition series of group, Group actions, Cauchy and Sylow's Theorems for finite groups, Internal and External direct product, P-groups, Nilpotent groups, Solvable groups, Structure theorem of finite Abelian groups.

Rings, Integral domain, Properties of ideals, Prime ideals and maximal ideals, Ring homomorphism and Quotient rings, Chinese remainder theorem, Euclidean domain, Euclidean Algorithm, Principal ideal domain, Unique factorization domain, Polynomial rings.

Field extensions, Basic properties of degree of field extensions.

Recommended Readings

Text Books: -

1. Dummit D. S., Foote R. M., *Abstract Algebra*, 3rd Edition, John Wiley & Sons, NY, 2011.
2. Artin M., *Algebra*, 2nd Edition, Pearson Education, 2011.

Reference books: -

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code	**:**	**21MAT**
Course Name	**:**	**Ordinary Differential Equation**
Credits	**:**	4 **L -** 3 **T -** 1 **P -** 0
Course Type	**:**	Core
Prerequisites	**:**	Knowledge of linear differential equations with constant/variable coefficients

Course Contents

Series solution. Real analytic solutions, Taylor's Series, Ordinary and singular points. Radius of convergence .Series solution near an ordinary point. Series solution near a regular singular point (Method of Frobenius).

Existence and Uniqueness of Initial Value Problems: Picard's and Peano's Theorems. Boundary Value Problems for Second Order Equations.

Orthogonal functions and orthonormal sets, Oscillations of second order equations, Sturm comparison theorems, Elementary linear oscillations, Eigenvalues and Eigenfunctions. Sturm-Liouville system. Green's functions.

System of simultaneous linear differential equations with constant and variable coefficients. Asymptotic behavior and Stability theory.

Recommended Readings

Text Books:-

1. Ahmad S. and Ambrosetti A., *A Text Book on Ordinary Differential Equations,* Springer, 2015.
2. Nandakumaran A.K., Datti P.S. and George R.K., *Ordinary Differential Equations: Principles and Applications,* Cambridge University Press, 2017.
3. Simmons G.F. and Krantz S.G., *Differential Equations Theory, Techniques and Practice,* McGraw Hill, 2006.

.

2. Braun M., *Differential Equations and Their Applications,* Springer, 1993.
3. Coddington E.A. and Levison N., *Theory of Ordinary Differential Equations,* McGraw Hill, 2017.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Real Analysis

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : Undergraduate Calculus

Course Contents

Review of the real number system, definition of a metric space and its examples, convergence of sequences in metric spaces, Subsequences, Cauchy sequences and complete metric spaces, Cantor Intersection Theorem, Baire category theorem.

Limits and Continuity of a function defined on a metric space, uniform continuity, completion of a metric space, contraction mapping, Banach fixed point theorem, connectedness, compactness, Heine Borel theorem.

Monotonic functions, Functions of bounded variation, Partition, Riemann-Stieltjes sum, Riemann-Stieltjes integral, properties, step function as integrator, reduction of RS integral to a finite sum, upper and lower Stieltjes sums, upper and lower integrals, Riemann condition, comparison theorem, mean value theorems, second mean value theorem for RS integrals.

Sequences and series of functions, Pointwise convergence, uniform convergence and its relation to continuity, differentiation and integration of series of functions, Cauchy condition for uniform convergence of series, Power Series, Weierstrass approximation theorem (only statement), equicontinuity, Arzela-Ascoli theorem and applications.

Recommended Readings

Text books-

1. Carothers N.L., *Real Analysis*, Cambridge University Press, Indian Edition, 2009.
2. Shirali S. and Vasudeva H.L., *Metric Spaces*, Springer, South Asian edition, 2019.

Reference books-

1. Ghorpade S.R. and Limaye B.V., *A Course in Calculus and Real Analysis*, Springer, 2006.
2. Royden H.L., *Real Analysis*, McMillan Publication Co. Inc. New York, 1988.
3. Apostol T.M., *Mathematical Analysis*, Narosa Publishing House, 1985.
4. Rudin W., *Principles of Mathematical Analysis*, McGraw Hill, Singapore, 1976.

Online resources-

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Multivariable Calculus

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : Undergraduate Calculus

Course Contents

Limits and Continuity of functions defined on Euclidean Spaces: Review of vector algebra in R^n. Real-valued functions of several variables. Level sets (level curves, level surfaces, etc.). Vector valued functions of several variables. Sequences in R^n and their limits. Neighborhoods in R^n. Limits and continuity of scalar- and vector-valued functions of several variables.

Differentiation: Partial derivatives. Differentiability of a real-valued function of several variables, the concept of (total) derivative. Gradient and directional derivatives. Chain Rule. Euler's Theorem. Higher order partial derivatives. Mixed Derivative Theorem. Mean Value Theorem and Taylor's Theorem for functions of several variables. Review of quadratic forms. Hessian matrix. Local maxima/minima and saddle points. Constrained maxima and minima of real-valued functions of several variables. Differentiation of vector-valued functions of several variables. Jacobians, Chain Rule. Contraction principle in R^n. Implicit function theorem, Inverse function theorem.

Multiple Integrals: Definition of double (resp: triple) integral of a function defined and bounded on a rectangle (resp: box). Geometric interpretation. Basic properties of double and triple integrals. Iterated integrals, Fubini's Theorem. Integrability and the integral over arbitrary bounded domains. Change of variables formula (Statement only). Polar, cylindrical and spherical coordinates, and integration using these coordinates.

Line Integrals: Paths (parameterized curves) in R^n, Smooth and piecewise smooth paths. Closed paths. Equivalence and orientation preserving equivalence of paths. Definition of the line integral of a vector field over a piecewise smooth path. Basic properties of line integrals. First and Second Fundamental Theorems of Calculus for Line Integrals. Green's Theorem (proof only in the case of rectangular domains) and its applications to evaluation of line integrals.

Surface Integrals: Parameterized surfaces. Smoothly equivalent parameterizations. Area of such surfaces. Definition of surface integral. Curl and divergence of a vector field. Stokes' Theorem (proof assuming the general form of Green's Theorem), Gauss' Divergence Theorem (proof only in the case of cubical domains) and their applications.

Online resources-

1. NPTEL course: *Multivariable Calculus* coordinated by IIT Roorkee available at the link: https://nptel.ac.in/courses/111/107/111107108/ (as on 3rd August 2021).

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Computer Language

Credits : 1 **L -** 1 **T -** 0 **P -** 0

Course Type : Core

Prerequisites : None

Course Contents

Introduction to C, Algorithms and Flowcharts, Constants, Variables, Data Types, Declarations, Operators and Expressions, Operator Precedence and Associativity, Input and Output Operations, Formatting, Decision Making, Branching, Looping, Arrays, Character Arrays and Strings

Recommended Readings

Text book-

1. Balagurusamy E., *Programming in ANSI C*, McGraw Hill, 8th Edition, 2019.

Reference book-

1. Kernighan B. W. and Ritchie D. M., *The C Programming Language (Ansi C Version)*, PHI Learning, 2015.

Online resources-

1. NPTEL course: Introduction to Programming in C By Dr. Satyadev Nandakumar, IIT Kanpur (https://onlinecourses.nptel.ac.in/noc19_cs42/preview)

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAP

Course Name : Computer Lab

Credits : 2 L - 0 T - 0 P - 4

Course Type : Core

Prerequisites : None

Course Contents

Programming Assignments: Computer Language based theory

Programming Assignment Manual will be prepared and will be the reference for the questions, assignments, evaluation and the laboratory practices.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : General Topology

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : Real Analysis

Course Contents

Definition of a topological space, open and closed sets, metric space as an example of a topological space, neighbourhoods, bases and subbases, limit points, closures, interiors, convergence of sequences in topological space, insufficiency of sequences and first countability, subspace topology, hereditary properties.

Continuous maps, open and closed maps, homeomorphisms, separable spaces, second countability, quotient topology, weak topology, product topology, metrizable spaces, completely metrizable spaces and function spaces.

T_1-axiom, Hausdorff spaces, regularity, complete regularity, normality, Urysohn Lemma, Tychonoff embedding and Urysohn Metrization Theorem, Tietze's Extension Theorem.

Directed sets**,** Nets, Connectedness, path connectedness, component and path components, locally connected spaces, Lindelöf spaces, compact spaces and various types of compactness: countably compact, sequentially compact, pseudocompact spaces and their relationships, Tychonoff Theorem, One point Compactification.

Recommended Readings

Text book-

1. Patty C.W., *Foundation in General Topology*, Jones and Bartlett, 2010.
2. Munkres J. R., *Topology*, 2nd Edition, Pearson Education (India), 2001.
3. Armstrong M.A., *Basic Topology*, Springer (India), 2004.

Reference book-

1. Joshi K.D., *Introduction to General Topology*, New Age International, 2000.
2. Simmons G.F., *Introduction to Topology and Modern Analysis*, McGraw-Hill, 1963.
3. Kelley J.L., *General Topology*, Springer, Van Nostrand, 1955.
4. Willard S., *General Topology*, Addison-Wesley Publishing Co., Reading, Mass.-London-Don Mills, Ont., 1970.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Complex Analysis

Credits : 4 **L -** 3 **T -** 1 **P -** 0

Course Type : Core

Prerequisites : None

Course Contents

Topology of Complex number, Stereographic projection, Function of complex variable, Limits, Continuity, Uniform Continuity and Differentiability of function of complex variable, Exponential function, Trigonometric and inverse trigonometric functions, Logarithm function, Cauchy Riemann equation, Harmonic function, Harmonic conjugate.

Analytic function, Construction of analytic function, Entire function, Bilinear transformation, Problems on cross ratio, Fixed point, Normal form of bilinear transformation.

Zeros and singularities of analytic function, types of singularities: isolated or non-isolated singularity, classification of singularities: removable singularity, poles, essential and non-isolated essential, Power series, circle of convergence, radius of convergence, Abel's formula, Cauchy Hadmard formula.

Curve, Jordan curve, Smooth curve, Winding number, Complex integration, Cauchy integral theorem, Cauchy Goursat theorem, Cauchy's integral formulas, ML inequality, derivative of analytic function, Morera's theorem, Lucca theorem.

Liouville's theorem, Fundamental theorem of algebra, Identity theorem, Extension of Liouville's theorem, Taylor's Expansion, Laurent's series, Residue at a pole and at infinity, Cauchy's Residue theorem, Residue and Contour integration.

Meromorphic function, Rational function, Picard's little theorem, Argument principle, Maximum modulus and minimum modulus principle, Rouche's theorem, Conformal Mapping, Fundamental transformation, Schwarz lemma.

Recommended Readings

Text book-

1. Ponnusamy S., Silverman H., *Complex Variable with Application*s, Birkhauser, 2006.
2. Kasana H.S., *Complex Variables: Theory and Application*, PHI Intl Ltd, 2nd Edition, 2017.

Reference book-

1. Churchill R.V., Brown J.W., *Complex Variable & Applications*, Tata McGraw Hill Education, 2009.
2. Conway J.B, *Function of One Variable*, Narosa Distributors Pvt. Ltd., 1973.
3. Ahlfors L.V., *Complex Analysis*, McGraw Hill, 3rd Edition, 1979.
4. Zill D.G., Patrick D.S., *A First Course in Complex Analysis with Application*, Jones & Bartlett publications, 2013.
5. Daniel A., *A Complex Analysis Problem Book*, Birkhauser, 2010.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Introduction to Numerical Analysis

Credits : 4 **L -** 3 **T -** 1 **P -** 0

Course Type : Core

Prerequisites : Basic linear algebra and ordinary differential equations

Course Contents

Numerical Computations and Errors: Preliminaries of computing. Floating-point approximation of a number, Loss of significance and error propagation, Stability in numerical computation. Norms of vectors and matrices. Review of Taylor's series.

Linear Systems: Gaussian elimination with pivoting strategies, Gauss Jordan elimination. Iterative methods (Jacobi and Gauss-Seidal method) with convergence analysis.

Nonlinear Equations: Bisection method, Regula-falsi method, Secant method, Fixed-point iteration, Newton-Raphson method. Rate of convergence through error analysis. Solution of a system of nonlinear equations by fixed-point iteration and Newton's method.

Interpolation: Interpolation and Error. Finite difference operators. Newton's forward and backward difference interpolation formulae, Central difference formulae. Lagrange's interpolation, Newton's divided difference formulae for unequal interval. Spline interpolation.

Numerical Differentiation and Integration: Numerical differentiation, error estimates, Maxima/minima of tabulated functions. Newton-Cotes formulae with associated errors. Gaussian quadrature. Richardson extrapolation.

Numerical Solution of ODEs: Taylor's series method, Picard's method, Euler's and modified Euler's methods, Runge-Kutta methods. Solution of simultaneous and higher order equations. Predictor-Corrector methods. Single step and Multi-step methods: order, consistency, stability and convergence analysis. Two-point BVPs: Shooting and Finite difference method.

Recommended Readings

Text books:

1. Atkinson K.E., *An Introduction to Numerical Analysis*, 2nd Edition, Wiley-India, 1989.
2. Burden R.L. and Faires J.D., *Numerical Analysis*, 9th Edition, Cengage learning, 2011.

3. Gerald C.F. and Wheatly P.O., *Applied numerical analysis*, Seventh Edition, Pearson Addison-Wesley Pub. Co, 1985.

4. Sastry S. S., *Introductory Methods of Numerical Analysis*, Prentice Hall of India, 2012.
5. Sharma J.N., *Numerical methods for Engineers and Scientists*, 2nd edition, Narosa Publishing House New Delhi, 2008.

Online resources-

1. NPTEL course: *Numerical Analysis* coordinated by IIT Madras available at the link: https://nptel.ac.in/courses/111/106/111106101/ (as on 3rd August 2021.)

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department : **Department of Mathematics**
Course Code : **21MAT**

Course Name : **Partial Differential Equations**

Credits : 4 **L -** 3 **T -** 1 **P -** 0
Course Type : Core
Prerequisites : Basic Multivariable Calculus and ODEs

COURSE CONTENTS

Classification of first order PDE, Method of characteristics, Cauchy problem, Cauchy-Kowalewsky theorem, Holmgren's Uniqueness Theorem, Integral surfaces passing through a given curve, Nonlinear first-order PDEs, Compatible systems, Classification and Canonical forms of second order PDE, Charpit's method, Jacobi's method for nonlinear PDEs.

Laplace equation: Fundamental solution, Construction of Green's function for Dirichlet problem posed on special domains. Poisson's formula, Solution of Dirichlet problem on a rectangle by method of separation of variables, Mean value property, Maximum principles, Dirichlet principle

Heat equation: Fundamental solution, Solution of initial-boundary value problem by separation of variables method, Maximum principle.

Wave equation: D'Alembert's formula, Solution of wave equation on bounded domains by separation of variables method, Duhamel's principle, Solutions by spherical means, Non-Homogeneous Problems, Duhamel's principle, Energy Methods.

Recommended Readings

Text Books:

1. Evans L.C., *Partial Differential Equations*, AMS (1998).
2. McOwen R.C., *Partial Differential Equations – Method and Applications*, Pearson Education, second Edition (2005).

Reference books:

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Probability and Statistics

Credits : 4 **L -** 3 **T -** 1 **P -** 0

Course Type : Core

Prerequisites : none; [preferred – understanding of basic statistics]

Course Contents

Random Experiment, Sample Space, Events – Simple, Composite, Mutually Exclusive and Exhaustive Events, algebra of events. Various Definitions of Probability, Properties of probability function, Addition Theorem, Boole's and Bonferroni's Inequalities, Conditional Probability, Multiplication Theorem, Independence of Events ,Total probability, Baye's Theorem.

Random variables, Discrete and Continuous random variables and their expected value, mean, Variance and moment generating function. Specific discrete and continuous distributions, e.g. Binomial, Poisson, Geometric, Pascal, Hypergeometric, Uniform, Exponential, Weibull, Beta, Gamma, Erlang and Normal distributions.

Sampling from a distribution: random sample, concept of derived distribution of functions of random variables, concept of a statistic and its sampling distribution. Point and interval estimation, concept of bias and standard error of an estimate, standard error of sample mean, sample proportion and sample variance. Sampling distribution: χ-square -distribution, t-distribution and F-distribution and their properties. Test of significance: null and alternative hypothesis, errors in sampling (Type I and Type II), critical region, level of significance, Z-test, t-test, χ- -test, F-test. χ-Square test as a test of goodness of fit.

Recommended Reading

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Functional Analysis

Credits : 4 L - 3 T - 1 P - 0

Course Type : Core

Prerequisites : Real analysis, Linear algebra

Course Contents

Normed linear spaces and Banach spaces, Finite dimensional normed spaces, Riesz Lemma, compactness of closed unit disk, equivalence of norms, Schauder basis and separablilty. Bounded linear operators, continuous linear functionals, normed spaces of bounded linear operators, dual space, reflexive space and canonical mapping, weak and weak* topologies.

Hahn-Banach extension theorem, Uniform boundedness principle, open mapping theorem, closed graph theorem and their applications.

Inner product and Hilbert Spaces, orthogonal complements, Orthonormal sets, Total orthonormal sets, Bessel's Inequality, Parseval's relation, Riesz representation theorem. Adjoint operators in Hilbert Spaces, sesquilinear form, Compact Operators and Spectral Theorem, normal operator, unitary operators, Projections and orthogonal projections in Hilbert spaces, Best approximations in Hilbert Spaces.

Recommended Readings

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Special Functions

Credits : 3 **L -** 3 **T -** 0 **P -** 0

Course Type : Elective

Prerequisites : Ordinary Differential equations, Differential and Integral calculus

Course Contents

The Gamma and Beta Function: Preliminaries, Euler's integral for Gamma (Z), Gamma and Beta functions and its elementary properties Factorial function, Gauss Multiplication formula, Legendre's duplication formula, Gauss multiplication theorem, Incomplete gamma function, Incomplete beta function, Mittag-leffler's function, Riemann Zeta Function.

The Hypergeometric Function : Definition, Integral representation of hypergeometric function, Transformations, Gauss's hypergeometric functions and its elementary properties, Gauss's hypergeometric differential equation and its solution, Gauss's hypergeometric function, Evaluation of hypergeometric function, relations of contiguity, theorem due to Kummer's, Generalized Hypergeometric series, the function of ${}_uF_v$, Bilateral hypergeometric series.

Kummer's function (The Confluent hypergeometric function): Definitions and some elementary results, Recurrence relations, The differential equation, Kummer's first and second formula, Addition and multiplication theorems, Integral representations, Basic properties of ${}_1F_1$, Special cases and its relation to other functions, Products of Kummer's functions.

Bessel functions: Bessel differential equation and its solution, Bessel's functions $J_u(x)$, recurrence relation, generating functions, integral representation, and orthogonality of Bessel functions, modified Bessel function and its properties**.**

Legendre functions : Legendre's differential equation and its solution, Relations between Legendre functions, The function P(x) and Q(x), Multiplications of two Legendre functions, Integral representations, Integrals involving Legendre functions, Associated Legendre functions.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Applied Linear Algebra

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : Linear Algebra

Course Contents

Review on Inner Product Spaces, projection, orthogonal projection, best approximation, Finite Dimensional spectral theory for normal operators and self adjoint operators. Quadratic forms, Bilinear forms.

Orthogonal reduction, Discrete Fourier Transformation, Complementarity Subspaces, range-null space decomposition, orthogonal decomposition, Singular-value decomposition, Polar decomposition, Matrix Norms and location of eigenvalues, generalized inverse of a matrix.

Perron Frobenius Theory: Positive matrices, Nonnegative matrices, stochastic matrices and applications to Markov chains.

Recommended Readings

Text book-

1. Hoffman K., Kunze R., *Linear Algebra*, Prentice-Hall, Second Edition, 2008.
2. Meyer C.D., *Matrix Analysis and Applied Linear Algebra*, SIAM, 2001.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Commutative Algebra

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : Abstract Algebra

Course Contents

Revision of Rings and Ideals: Prime and maximal ideals. Chinese remainder theorem, Nilradical, Jacobson radical, operations on ideals, extension and contraction.

Basics of Modules: Module, submodule, quotient module, sums and products, Nakayama's lemma; Homomorphism, kernel, cokernel, direct sum, direct product, universal properties, free module, exact sequences, tensor product of modules and its exactness property, Localization of rings and modules.

Chain conditions: Noetherian rings, Hilbert basis theorem, Primary decomposition of ideals in Noetherian rings. Artinian rings and modules.

Integral Extensions: Integral dependence, going-up and going down theorems, Noether's normalization lemma, Hilbert Nullstellensatz, Krull's principal ideal theorem and dimension theorem.

Recommended Readings

NPTEL Course: https://nptel.ac.in/courses/111/106/111106098/

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Field and Galois Theory

Credits : 3 **L -** 3 **T -** 0 **P -** 0
Course Type : Elective
Prerequisites : Abstract Algebra

Course Contents

Field Theory: Review of basics of rings, integral domains and fields, Characteristic and prime subfields. Field extensions, Finite, algebraic, and finitely generated field extensions, Classical ruler and compass constructions, Splitting fields and normal extensions, algebraic closures. Finite fields. Quadratic and cyclotomic fields. Separable and inseparable extensions. Norm, trace and discriminant.
Galois Theory: Galois extensions, Galois groups, Fundamental Theorem of Galois Theory, Composite extensions, Examples (including cyclotomic extensions and extensions of finite fields). Solvability by radicals, Galois' Theorem on solvability.

Recommended Readings

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Graphs and Matrices

Credits : 3 L - 3 T - 0 P - 0

Course Type : Core / Elective

Prerequisites : Linear Algebra and Basic Graph Theory

Course Contents

Matrices, Eigenvalues of symmetric matrices, Graphs, Incidence matrix, Rank, Minors, Matchings in bipartite graphs. Adjacency Matrix, Eigenvalues of some graphs, Determinant, Bounds, Energy of a graph, Anti Adjacency matrix of a directed graph, Non-singular trees. Laplacian matrix, Basic properties, Computing Laplacian Eigenvalues, Matrix-tree theorem, Bounds of Laplacian spectral radius, Edge-Laplacian of a tree. Cycles and cuts, Fundamental cycles and Fundamental cuts, Fundamental matrices, Minors. Regular graphs, strongly regular graphs and friendship theorem, Graph with maximum Energy. Line Graph of tree, Block graphs, Signless Laplacian matrix, Nullity of the line graph of a tree. Algebraic connectivity, classification of trees, Monotonicity properties of Fielder vector, Bounds of algebraic connectivity. Distance matrix of a graph, Distance and Laplacian matrix of a tree. Chordal graphs, positive definite completion.

Recommended Readings

Text book-

1. Bapat R., *Graphs and Matrices*, Text and Readings in Mathematics, Second Edition, Hindustan Book Agency, New Delhi, 2014.

Reference book

1. Cvetkovic D., Rowlinson., Simic S., *An introduction to the theory of Graph Spectra*, First Edition, Cambridge University press, 2010.
2. Balakrishnan R., Ranganathan K., *A textbook of Graph Theory*, Second Edition, Springer, 2012.
3. Biggs N., *Algebraic Graph Theory*, Second Edition, Cambridge University press, 1993.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Advanced Functional Analysis

Credits : 3 **L -** 3 **T -** 0 **P -** 0
Course Type : Elective
Prerequisites : Functional Analysis

Course Contents

Topological vector spaces (TVS): Definition of a TVS, Separation properties, balanced, convex and absorbing sets in TVS and their properties, special neighborhood bases, quotient and product spaces, finite dimensional TVS, linear maps.

Locally Convex Spaces (LCS): Definition of a locally convex space, special neighborhood bases, seminorms, Minkowski functional, relation between seminorms and locally convex spaces, metrizable LCS, bounded sets and their properties, normability of LCS, Hahn Banach theorem, Dual of a locally convex space, polars and their basic properties.

Topologies associated with polars: weak and weak*-topologies, strong topology on X*, Banach-Alaoglu Theorem, Mackey topology and Mackey space, the topologies of bounded convergence and pointwise convergence.

Completeness in LCS: Barrelled and bornological spaces and their basic properties, equicontinuous family of linear maps between LCS, Banach–Steinhaus theorem, quasi-completeness, precompact sets, open mapping and closed graph theorems.

Recommended Readings

Text book-

1. Osborne M.S., *Locally Convex Spaces*, Springer, 2014.
2. Rudin W., *Functional Analysis*, McGraw Hill, Reprint 2018.

Reference book-

1. Narici L. and Beckenstein E., *Topological Vector Spaces*, 2nd edition, CRC Press, 2011.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Probability Theory

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : Measure and Integration

Course Contents

Algebra and σ-algebra, Borel σ-algebra, Lebesgue Measure, probability measure, basic laws of probability, Measurable functions, random variables, Monotone classes, π-systems, λ-systems. Monotone Class Theorem, Distribution function, inverse distribution function, the Fundamental Theorem of Probability, Lebesgue integration, Monotone convergence theorem, Fatou's Lemma, Dominating convergence theorem, Convergence "almost surely (a.s)", convergence in distribution, change of variable formula, expectation of a random variable, Product measure, Fubini's Theorem, independent random variables, Borel-Cantelli Lemmas, Tail σ-algebra, Kolmogorov's 0-1 Law. Various modes of convergence, law of large numbers, Characteristic functions, Moment expansion, characteristics function for Normal distribution. Inversion formula, density formula. Central Limit Theorems.

Recommended Readings

Text book-

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Flow and Thermal Instability

Credits : 3 **L -** 3 **T -** 0 **P -** 0
Course Type : Elective
Prerequisites : None

Course Contents

Basic concept of stability/instability - Static and dynamic instability - Temporal stability of inviscid incompressible flows - Squire transformation, Kelvin-Helmholtz stability - Temporal stability of viscous incompressible flows: Orr-Sommerfield problem, channel flow, plane Poiseuille flow, plane Couette flow, Blasius boundary layer flows, unbounded flows - Spatial stability of incompressible flows, incompressible inviscid flows - Centrifugal Instability - Thermal and inertial instabilities: Development of perturbations in space and time, equation of perturbation energy, the Boussinesq equations, free-free boundaries, rigid-rigid boundaries, free rigid boundaries - Convective instabilities: Benard problem, Couette-Benard flow, Rayleigh-Benard convection, Rayleigh-Taylor instability, Marangoni instability, Rayleigh-Benard-Marangoni instability, instabilities in stratified flows, introduction to chaos.

Recommended Readings

Text books-

1. Criminale W.O., Jackson T.L., Joslin R.D., *Theory and Computations of Hydrodynamic Stability*, Cambridge University Press, 2018.

2. Chandrasekhar S., *Hydrodynamic and Hydromagnetic Stability*, Dover Publication.

Reference book-

1. Schmid P.J., Henningson D.S., *Stability and Transition in Shear Flows*, Springer 2001

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Fluid Dynamics

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : None

Course Contents

Classification of fluids - Eulerian and Lagrangian approach - Irrotational flow - Equipotential surfaces - Mass flux density - Equation of continuity - Conservation of momentum - Integration of Euler's equation under different conditions - Bernoulli's equation - Kelvin's minimum energy and circulation theorems, Potential theorems - Complex potential, Sources, sinks, doublets and vortices, Milne-Thomson circle theorem - Blasius theorem - Three-dimensional flows - Motion of cylinders and spheres - Viscous flow, stress and strain analysis, Stokes hypothesis, Navier−Stokes equations of motion - Steady flow between parallel plates, Poiseuille flow, Steady flow between concentric rotating cylinders.

Recommended Readings

Text book-

1. Chorlton F., *Text Book of Fluid Dynamics*, CBS Publisher, 2005.

Reference books-

1. Fox R.W., Pritchard P. J. and McDonald A.T., *Introduction to Fluid Mechanics*, Seventh Edition, John Wiley & Sons, 2009.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Fractional Calculus & its Application

Credits : 3 **L -** 3 **T -** 0 **P -** 0

Course Type : Elective

Prerequisites : Ordinary and partial differential equations, Differential and Integral calculus

Course Contents

Brief review of Special Functions of the Fractional Calculus**,** Definition of Mittag-Leffler Functions of one and two parameters, Relations of Mittag-Leffler Function to some other functions, The Laplace transform of Mittag-Leffler Function in two parameters. Wright Function, Definition of Wright function, Integral relation and relation to other functions, Miller Ross function.

The Riemann Liouville Fractional Integral, Fractional Integrals of some functions namely binomial function, exponential, the hyperbolic and trigonometric functions, Bessel's functions, Hyper-geometric function, Dirichlet's Formula, Laplace Transform of the Fractional integral, Leibnitz's Formula for Fractional Integrals. Derivatives of the Fractional Integral and the Fractional Integral of Derivatives.

Derivatives, Properties of Fractional derivatives, Riemann-Liouville fractional derivatives, Riemann-Liouville left-sided derivative, Riemann-Liouville right-sided derivative, Leibnitz's Formula of Fractional Derivatives. Laplace transform of fractional derivatives, Fourier transform of fractional derivatives and Mellin transform of fractional derivatives. Fractional derivatives of standard functions Left and right fractional derivatives.

Definition of Weyl Fractional Integral, Weyl Fractional Derivatives, A Leibniz Formula for Weyl Fractional Integral and simple applications.

Definition Caputo Fractional Derivative, Leibnitz's formula for Caputo fractional derivative, Laplace transform of Caputo fractional derivative, Difference between Caputo fractional derivative and R-L fractional derivative, Caputo left-sided derivative, Caputo right-sided derivative, Caputo-Fabrizio fractional derivative.

(No. of lectures-35)

Department/Centre : **Department of Mathematics**

Course Code : **21MAT**

Course Name : **Calculus of Variations and Tensor Analysis**

Credits : 3 **L -** 0 **T -** 0 **P -** 0

Course Type : Elective

Prerequisites : Calculus

Course Contents

Calculus of variations: Basic concepts of calculus of variations, Variation and its properties, Euler's equation, Fundamental lemma of calculus of variation, Functionals dependent on higher order derivatives and on several independent variables, Variational problem in parametric form, applications Variational problem with fixed boundaries, Variational problem with moving boundaries, Sufficient condition for an extremum. Isoparametric problem.

Tensor Analysis: Notation and Definitions of Contravariant and covariant tensors of first and second order. Invariants. Contravariant, covariant and mixed tensors. The Kronecker delta. Algebra of tensors Symmetric and skew-symmetric tensors. Addition and scalar multiplication. Contraction and Quotient law for tensors. Reciprocal Tensor. Definition and properties of first and second kind of Christoffel's symbols, covariant differentiation of tensor, Ricci's theorem, Riemann- Christoffel 's tensor and its properties, Covariant curvature tensor .

Department/Centre : Department of Mathematics

Course Code : 21MAT

CourseName : Fractional Differential Equations

Credits : 3 **L -** 3 **T -** 0 **P -** 0

Course Type : Elective

Prerequisites : Basic calculus, numerical methods

Course Contents

Linear Fractional Differential Equations: Fractional Differential Equation of a General Form. Existence and Uniqueness Theorem as a Method of Solution. Dependence of a Solution on Initial Conditions.

The Laplace Transform Method. Standard Fractional Differential Equations. Sequential Fractional Differential Equations.

Fractional Green's Function: Definition and Some Properties. One-Term Equation. Two-Term Equation. Three-Term Equation. Four-Term Equation. General Case: n-term Equation.

Other Methods for the Solution of Fractional-order Equations: Power Series Method. Babenko's Symbolic Calculus Method. Method of Orthogonal Polynomials. The Mellin Transform Method.

Numerical Evaluation of Fractional Derivatives: Approximation of Fractional Derivatives. The "Short-Memory" Principle. Calculation of Heat Load Intensity Change in Blast Furnace Walls. Order of Approximation. Computation of Coefficients. Higher-order Approximations.

Numerical Solution of Fractional Differential Equations: Initial Conditions: Which Problem to Solve? Numerical Solution. Examples of Numerical Solutions. The "Short-Memory" Principle in Initial Value Problems for Fractional Differential Equations. Matrix approach to discrete fractional calculus. Numerical solution of nonlinear problems.

Applications. Fractional order systems and controllers.

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Numerical Linear Algebra

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : Linear Algebra and Numerical Analysis.

Course Contents

Review of basic concepts: Floating-point arithmetic, matrices, operation counts. Matrix multiplication, block matrices. Matrix norms. Linear system sensitivity, conditioning.

Matrix factorizations: Cholesky factorization. QR factorization. LU factorization and Gaussian elimination; partial pivoting. Complete pivoting, rook pivoting. Error analysis. Numerical examples.

Linear least squares problem: Basic theory using singular value decomposition (SVD) and pseudoinverse. Perturbation theory. Numerical solution: normal equations. SVD and rank deficiency.

Eigenvalue problem: Basic theory, including perturbation results. Power method, inverse iteration. QR algorithm. Arnoldi iteration, Lancoz method.

Iterative methods for linear systems: Review of Jacobi and Gauss-Seidel iterations. Residual corrector method. SOR iterations. Kronecker product. Krylov subspace methods, conjugate gradient method. GMRES. Preconditioning.

Recommended Readings

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Integral Equations

Credits : 3 L - 3 T - 0 P - 0

Course Type : Elective

Prerequisites : Basic theory of differential equations, Calculus of several variables.

Course Contents

Definition and classification, conversion of initial and boundary value problems to an integral equation, Eigen-Values and Eigen functions. Solutions of homogeneous and general Fredholm integral equations of second kind with separable kernels.

Solution of Fredholm and Volterra integral equations of second kind by methods of successive substitutions and successive approximations, Resolvent kernel and its results.

Integral equations with symmetric kernels: Complex Hilbert space, Orthogonal system of functions, fundamental properties of eigen values and eigen functions for symmetric kernels, expansion in eigen-functions and bilinear forms, Hilbert-Schmidt theorem.

Solution of Fredholm integral equations of second kind by using Hilbert-Schmidt theorem. Fredholm theorems. Solution of Volterra integral equations with convolution type kernels by Laplace transform.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Number Theory

Credits : 3 L - 3 T - 0 P - 0

Course Type : Open Elective

Prerequisites : Knowledge of number system

Course Contents

Congruences: Basic definitions and properties, complete and reduced residue systems, theorems of Fermat, Euler & Wilson, application to RSA cryptosystem. Linear congruences and Chinese remainder theorem, quadratic congruences, and Quadratic Reciprocity law. **Arithmetical functions**: Euler's Function, τ and σ functions with some properties and their rate of growth, Möbius-Inversion formula.

Diophantine Approximation: Continued fractions and their connection with Diophantine approximations, applications to Pell's equations.

Diophantine Equations: Linear equations, Binary quadratic forms, Solutions of some quadratic and higher degree diophantine equations.

Partitions: Partitions of a number, Some basic properties and results.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Discrete Mathematics

Credits : 3 L - 3 T - 0 P - 0

Course Type : Open Elective

Prerequisites : none; [preferred – understanding of basic mathematics]

Course Contents

Logic: Propositional Logic, language of propositional logic, truth table, natural deduction, predicate logic: language of predicate logic, Logical inference with Quantifiers. Proof techniques: Introduction to different standard proof techniques.

Set Theory: Review of basic set operations, cardinality of a set. Countable and uncountable sets. Relations, Types of relations, operations of relations and applications, Poset, Congruence arithmetic. Partially ordered sets and Lattices, Hasse Diagrams, lattices as algebraic systems sub-lattices, direct product and Homomorphisms, Complete lattices.

Combinatorics: Counting techniques: Pigeon Hole principle, inclusion exclusion principle, recurrence relation and generating function.

Graphs: Complete graphs, regular graphs, bipartite graphs, Vertex degree, subgraphs, paths and cycles, the matrix representation of graphs, fusion, trees and connectivity, bridges, spanning trees, chromatic number, connector problems, shortest path problems, cut vertices and connectivity.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Classical Mechanics

Credits : 3 L - 3 T - 0 P - 0

Course Type : Open Elective

Prerequisites : None

Course Contents

D'Alembert's principle, General equations of motion, Motion of the centre of inertia (Motion of translation), Motion relative to the centre of inertia (Motion of rotation)

Motion about a fixed axis: Moment of effective forces about a fixed axis of rotation, Moment of momentum, Kinetic energy of a rotating body about a fixed line, Principle of angular momentum, Principle of energy and work.

Lagrange's equations of motion: Degrees of freedom and generalized coordinates, Lagrange's equations of motion under finite forces, Lagrangian function, Deduction of principle of conservation of energy from the Lagrange's equations.

Motion in three dimensions: Euler's theorem for motion in three dimensions, system of moving axes, Euler's dynamical equations of motion under finite forces, Kinetic energy of body rotating about a fixed point, Eulerian angles and Euler's geometrical equations, Deduction of Euler's dynamical equations from Lagrange's equations of motion.

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Introduction to Graph Theory

Credits : 3 L - 3 T - 0 P - 0
Course Type : Open Elective
Prerequisites : UG Mathematics

Course Contents

Definition and basic concepts, Trees, characterizations, counting of minimum spanning tree, graph and matrices, Paths and distance in graphs, center and median of a graph, activity digraph and critical path, Eulerian graphs, Definition and characterization, Hamiltonian graphs, Necessary and sufficient conditions, Planar Graphs: properties, dual, genus of a graph. Peterson graph.
Graph coloring, vertex coloring, chromatic polynomials, edge coloring, planar graph coloring, Matching and factorizations, maximum matching in bipartite graphs, maximum matching in general graphs, Hall's marriage theorem, factorization, Networks, The Max-flow min-cut theorem, connectivity and edge connectivity, Menger's theorem.

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY JAIPUR

Department/Centre : Department of Mathematics

Course Code : 21MAT

Course Name : Integral Transforms

Credits : 3 L - 3 T - 0 P - 0

Course Type : Open Elective

Prerequisites : Ordinary Differential equations, Differential and Integral calculus

Course Contents

Laplace Transforms : Definition of Laplace Transform and examples, Sufficient conditions for the existence of Laplace Transform, Laplace Transform of some elementary, Properties of Laplace Transform, shifting and scaling properties, Differentiation and Integration properties of Laplace Transform, The Error function, Transform of Bessel function, Periodic functions, Initial & Final Value Theorem, Inverse Laplace Transforms and its examples, Convolution theorem and related examples.

Bilateral Laplace Transform, Relation between Bilateral Laplace transform and Laplace Transform, Some Properties.

Applications of Laplace Transform: Solution of ODE – Initial value problems for linear equations with constant coefficients, Solution of Simultaneous ODE with constant coefficient.

Fourier Transform: Fourier sine and cosine transformation and its examples, Properties of Fourier sine and cosine transform, Transform of Derivatives, Parseval's Theorem, Inversion theorem, Convolution theorem, Relation between Bilateral Laplace transform and Fourier Transform. Applications of Fourier Transform.

Hankel Transform : Elementary properties, Inversion theorem, transform of the derivative of functions, transform of elementary functions, Parseval's theorem relation between Laplace transform and Hankel transform, Basic operational property of Hankel transform

Mellin Transform: Definition and properties of Mellin transform, shifting and scaling properties, Mellin transform of derivative and integral.

Hartley Transform: Definition of Hartley Transform and examples, Inversion theorem, Relation between Stieltjes Transform and Fourier Transform.
